NON-FINAL REJECTION

Claim Rejections

Claim Rejections - 35 USC § 112

Claims 11-14, 16-17, 19, 20-22, 24-25, 27-28, 30-34 and 36-39 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Correction or clarification is required.

In claim 11, it is unclear how the stages can be "turned-off" since no means for performing the turning off function is recited in the claim. The same is true for claim 20, 27 and 34.

In claim 27, it is unclear how the recitation "selectively feeding back an output . . . divide stages" on lines 5-6 is read on the preferred embodiment. Insofar as understood, no such limitation is seen on the drawings. The same is true for claim 34.

The remaining claims are dependent from the above claims and therefore also considered indefinite.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 10/807,852

Art Unit: 2816

Claims 11, 19, 27-28, 34 and 39 are rejected under 35 USC 102 (b) as being anticipated by Kimura (US 3,813,610).

Kimura discloses in Figure 1 a divider circuit comprising:

- a sequence of divide stages (5) coupled to provide a plurality of difference divide ratios; and
- wherein respective ones of the stages include an activation input (SD) coupled to receive an activation signal from a logic gate (9) to selectively turn off one or more of stages (5) by switches (10) if one or more of the stages are not used for a selected divide ration.

With regard to claim 19, the divider (5) of Kimura can be selected to alter from a dividing ration 1:32 to 1:1, see lines 45-47, column 4.

Claim Rejections - 35 USC § 103

'The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 20 is rejected under 35 USC 103 (a) as being unpatentable over Hassoun (US 6,061,418) in view of Kimura (US 3,813,610).

Hassoun discloses in FigurezA-zB, 3A-3B and 5 a divîder ckcuit comprising a sequence of divide stages (310 1 to 310 N) coupled to provide a plurality of difference divide ratios; a means for correcting a duty cycle (530, Figure 5); and at least on multiplexer (320, 330) coupled

Application/Control Number: 10/807,852 Page 4

Art Unit: 2816

to selectively feedback the output of a first divide stage (310 2) to an input of divide stage (310-1) earlier in the stages. However, Hassoun does not disclose that divide stages each has an activation input to selectively turn off a respective divide stage. Kimura teaches in Figure 1 a divider circuit comprising AND gates (9) for selectively turning off selected divide stages to alter programmable dividing ratios, see lines 45-48, column 4. It would have been obvious to a person

having skill in the art at the time the invention was made to employ the gates suggested by

Kimura in the circuit of Hassoun for the purpose of altering programmable dividing ratios.

Allowable Subject Matter

Claims 1-3, 6-9 and 16-17 are allowed because the prior art of record does not show the duty cycle stage as combined in claim 1.

Claims 12-14, 21-22, 24-25, 30-34 and 36-38 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The claims are allowed because the prior art of record does not show:

- a duty-cycle stage coupled to correct a duty cycle of outputs having an odd divide ratio as combined;
 - a self correction logic as combined; and
 - a means for correcting an abnormal stage as combined.

Conclusion

Art Unit: 2816

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DINH T. LE whose telephone number is (571) 272-1745. The examiner can normally be reached on Monday-Friday (8AM-7PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, TIMOTHY CALLAHAN can be reached at (571) 272-1740.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
